

## RIGHT TRAINING; TARGETS APPROACHED

IS Technology understand technology trends and to address the marketplace demand for various departments enabling us to provide right training solutions.

- Industrial Automation
- Software Designing
- Embedded System
- SCADA System

The technology is dynamically progressing now and to stay abreast with the cutting-edge technologies and their best utilization requires time to time training. With field specialized and skilled training methodology on a vibrant spectrum of latest technologies makes us a leader. We provide skills training to engineering professionals and introduce them with the latest in Software Development, Embedded System Design and Development, SCADA System Design and Industrial Automation.

### Corporate and Companies Staff

IS technology understands the need of relevant and reliable training modules for your company staff including technicians and engineer to have them not only rock solid understanding on technologies they work on but also introducing to future technologies replacing they are hand on. Organizations with a respected market also need to have automatic process flow to provide high quality services to their customers. We offer to provide training to new recruit of your organization as well as existing staff to improve quality of service through comprehensive tailored training modules in the area of maintenance and operations, PLC ladder logic writing, embedded system design and right selection of CPU modules for the application, SCADA design and efficient solar system design for primary and backup power.

Tacking an edge of IS technology specialist team we also offer training on industrial automation for the industry who would like to convert from manual monitoring and control process to an automatic and to improve present monitoring and control system.

## RIGHT TRAINING; TARGETS APPROACHED

IS Technology is a soul research and development company who owns appropriate hands on emerging tools.

### Working Professionals

Today to maintain their position world market leader's really make efforts and invest in human sourcing to find skilled people. IS Technology knows the importance to delivering targeted expertise training to individuals who are interested to grasp the new design and development tools and technologies in the domain of android development, .Net, real time operating system (RTOS), reverse engineering and troubleshooting, embedded software and hardware design, SCADA system design and Industrial multilayer PCB layout design.

### Fresh Graduates

Practical hands on and particular skills are the only valued market demands. We know to convert your knowledge to practical experience with the help of field specialist instructors having worldwide experience. We are offering intensive training programs designed for people who really want to become the part developer's team in any leading organization as follows:

- Embedded Software Development
- PLC Ladder Logic Development
- PCB Layout Design, Tools and Design Considerations
- Embedded Environment Peripherals, Devices and Interfacing
- Android Application Development
- Desktop Application Development
